# 1. Scope

This specification defines general provisions as well as inspection standards for TFT module supplied by KINGTECH.

# 2. General Information

| TITEM                          | STANDARD VALUES         | UNITS |
|--------------------------------|-------------------------|-------|
| LCD type                       | 5.0"TFT                 |       |
| Dot arrangement                | 800(RGB)×480            | dots  |
| Color filter array             | RGB vertical stripe     |       |
| Display mode                   | Normally BLACK          | -     |
| Gray Scale Inversion Direction | ALL o'clock             |       |
| Eyes Viewing Direction         | 80/80/80                |       |
| Module size                    | 120.7(W)×75.8(H)×3.0(T) | mm    |
| Active area                    | 108 (W)×64.8(H)         | mm    |
| Dot pitch                      | 135(W)×135(H)           | um    |
| Interface                      | RGB 24bit               |       |
| Operating temperature          | -20 ~ +70               | °C    |
| Storage temperature            | -30 ~ +80               | °C    |
| Back Light                     | 24White LED             |       |
| Weight                         | TBD                     | g     |

# 3. External Dimensions

Revision: V0 5/21

# 4. Interface Description

| PIN NO. | PIN NAME | DESCRIPTION  |
|---------|----------|--|
| 1       | LEDK     | LED backlight (Cathode).                                     |
| 2       | LEDA     | LED backlight (Anode).                                       |
| 3       | GND      | Ground.  |
| 4       | VDD      | Power supply.  |
| 5~12    | R0~R7    | Red Data   |
| 13~20   | G0~G7    | Green Data   |
| 21~28   | B0~B7    | Blue Data  |
| 29      | GND      | Ground.  |
| 30      | PCLK     | Clock  |
| 31      | DISP     | Display on/off   |
| 32      | HSYNC    | Horizontal sync input in RGB mode.                           |
| 33      | VSYNC    | Vertical sync input in RGB mode.                             |
| 34      | DE       | Data enable input. Active high to enable the input data bus. |
| 35      | NC       | No connection  |
| 36      | GND      | Ground.  |
| 37      | NC       | NC   |

Note (1) Measurement Setup: The LCD module should be stabilized at given temp. 25°C for 15 minutes to avoid abrupt temperature change during measuring. In order to stabilize the luminance, the measurement should be executed after lighting backlight for 15 minutes in a windless room.

**Revision: V0** 11/21

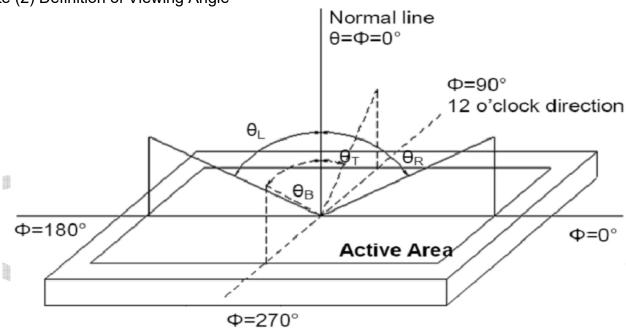

Tel: 86-755-23037763

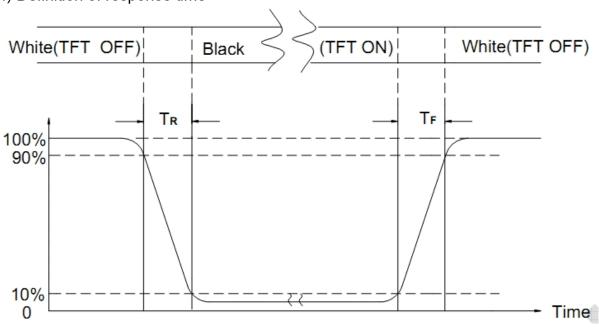

Note (3) Definition of Contrast Ratio (CR)

The contrast ratio can be calculated by the following expression Contrast Ratio (CR) = L63 / L0

L63: Luminance of gray level 63, L0: Luminance of gray level 0

Note (4) Definition of response time

Note (5) Definition of Transmittance (Module is without signal input)

Transmittance = Center Luminance of LCD / Center Luminance of Back Light x 100%

Note (6) Definition of color chromaticity (CIE1931)

Color coordinates measured at the center point of LCD

Note (7) Transmittance is the Value with WV Polarizer and BLU

Revision: V0 12/21

| 7   | Vibration Test                   | Frequency:10Hz~55Hz~10Hz Amplitude:1.5MM X, Y, Z direction for total 3hours (Packing condition test will be tested by a carton) | 7. The surface shall be free from damage. 8. The electric characteristic requirements shall be |
| 8   | Drooping Test                    | Drop to the ground from 1M height one time every side of carton. (Packing condition test will be tested by a carton)            | satisfied.   |
| 9   | ESD Test                         | Voltage: ±8KV, R:330Ω, C:150PF, Air Mode,10times  |  |

#### **REMARKS:**

- 1. The Test samples should be applied to only one test item.
- 2. Sample side for each test item is 5~10pcs.
- 3. For Damp Proof Test, Pure water (Resistance >  $10M\Omega$ ) should be used.
- 4. In case of malfunction defect caused by ESD damage, if it would be recovered to normal state after resetting, it would be judged as a good part.
- 5. EL evaluation should be accepted from reliability test with humidity and temperature: Some defects such as black spot/blemish can happen by natural chemical reaction with humidity and Fluorescence EL has.
- 6. Failure Judgment Criterion: Basic Specification Electrical Characteristic, Mechanical Characteristic, Optical Characteristic.

# 11. Inspection Standards

# 11.1. Quality

The quality of goods supplied to purchaser shall come up to the following standards:

## 11.1.1. Inspection Tools and Instruments

Vernier calipers, film scales, multimeter, magnifying eyepiece, ND5%, luminance meter and so on.

### 11.1.2. The Method of Preserving Goods

After delivery of goods from KINGTECH to purchaser, purchaser shall keep the LCM at -10°C to 30°C, and it might be desirable to keep at the normal room temperature and humidity until incoming inspection or throwing into process line.

## 11.1.3. Incoming Inspection

# (A) The methods of Inspection

If purchaser makes an incoming inspection, a sampling plan shall be applied on the condition that quality of one delivery shall be regarded as one lot.

## (B) The standard of quality:

ISO-2859-1 (same as MIL-STD-105E), Level: II

| CLASS    | AQL (%) |
|----------|---------|
| Critical | 0.4 %   |
| Major    | 0.65 %  |
| Minor    | 1.5 %   |

Every item shall be inspected according to the class.

### (C) Measure

If as the result of above receiving inspection, a lot out is discovered, purchaser Shall inform seller of it within seven days. But first shipment within fourteen days.

## 11.1.4. Warranty Policy

KINGTECH will provide one-year warranty for the products only if under Specification operating conditions. KINGTECH will replace new products for these defect products which are under warranty period and belong to the responsibility of KINGTECH.

# 11.2. Checking Condition

- **11.2.1** Checking direction shall be in the 45 degree area to face the sample.
- **11.2.2** Inspector shall see from over 300±25mm with bare eyes far from the sample.

#### **11.2.3** Ambient Illumination:

0 ~30 Lux for functional inspection

500 ~ 1200 Lux for external appearance inspection.

Revision: V0 14/21

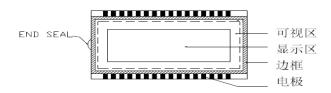

Tel: 86-755-23037763

#### 11.2.4 Test Area:

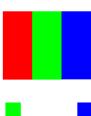

- 11.2.5 Inspection should be carried out with rope electrostatic ring and static finger cover (both hands except small fingers must be worn)
- **11.2.6** The inspector may make a visual inspection or a comparative examination with a film ruler and a magnifying eyepiece. Individual defects shall be determined according to the limited samples.
- Functional testing uses electrical testing fixtures or test fixtures required by 11.2.7 customers.
- **11.2.8** The ion fan should be used when testing.

# The principle of judgement:

- 11.2.9.1 If the defect outside the visual area does not affect the assembly and display, it will be judged as a good product.
- 11.2.9.2 Poor definition:

#### Pixel:

A combination of three sub-pixels (Red + Green + Blue).

#### Dot:

Any of the sub-pixels (Red or Green or Blue).

# Bright and dark dots:

A point pixel (sub-pixel: R, G, B pixels) is lit or turned off during the display function test.

### Highlights:

Usually considered to be shown on a black screen.

#### Dark spots:

They are generally considered to be shown on R, G, B solid colors or white images.

#### Neighborhood:

Two or three adjacent point pixels (dot: sub-pixel) connected together (R, G or G, B or B, R or RGB).

# 12. Handling Precautions

## 12.1 Mounting method

The LCD panel of KINGTECH module consists of two thin glass plates with polarizes which easily be damaged. And since the module is constructed as to be fixed by utilizing fitting holes in the printed circuit board, extreme care should be needed when handling the LCD modules.

# 12.2 Caution of LCD handling and cleaning

When cleaning the display surface, Use soft cloth with solvent [Recommended below] and wipe lightly

- Isopropyl alcohol
- Ethyl alcohol

Do not wipe the display surface with dry or hard materials that will damage the polarizer surface.

Do not use the following solvent:

- Water
- Aromatics

Do not wipe ITO pad area with the dry or hard materials that will damage the ITOPatterns.

Do not use the following solvent on the pad or prevent it from being contaminated:

- Soldering flux
- Chlorine (CI), Sulfur (S)

If goods were sent without being silicon coated on the pad, ITO patterns could be damaged due to the corrosion as time goes on.

If ITO corrosion happen by miss-handling or using some materials such as Chlorine (CI), Sulfur (S) from customer, Responsibility is on customer.

## 12.3 Caution against static charge

The LCD module use C-MOS LSI drivers, so we recommended that you:

Connect any unused input terminal to POWER or GROUND, do not input any signals before power is turned on, and ground your body, work/assembly areas, and assembly equipment to protect against static electricity.

### 12.4 packing

- Module employs LCD elements and must be treated as such.
- Avoid intense shock and falls from a height.
- To prevent modules from degradation, do not operate or store them exposed direct to sunshine or high temperature/humidity

### 12.5 Caution for operation

- It is an indispensable condition to drive LCD's within the specified voltage limit since the higher voltage then the limit cause the shorter LCD life.
- An electrochemical reaction due to direct current causes LCD's undesirable deterioration, so that the use of direct current drive should be avoided.
- Response time will be extremely delayed at lower temperature then the operating temperature range and on the other hand at higher temperature LCD's how dark color in them. However those phenomena do not mean malfunction or out of order with

Revision: V0 20/21

Tel: 86-755-23037763

LCD's, which will come back in the specified operation temperature.

- If the display area is pushed hard during operation, some font will be abnormally displayed but it resumes normal condition after turning off once.
- Slight dew depositing on terminals is a cause for electro-chemical reaction resulting in terminal open circuit.

Usage under the maximum operating temperature, 50%Rh or less is required.

## 12.6 Storing

In the case of storing for a long period of time for instance, for years for the purpose or replacement use, the following ways are recommended.

- Storage in a polyethylene bag with the opening sealed so as not to enter fresh air outside in it. And with no desiccant.
- Placing in a dark place where neither exposure to direct sunlight nor light's keeping. the storage temperature range.
- Storing with no touch on polarizer surface by the anything else.
- [It is recommended to store them as they have been contained in the inner container at the time of delivery from us

## 12.7 Safety

- It is recommendable to crash damaged or unnecessary LCD's into pieces and wash off liquid crystal by either of solvents such as acetone and ethanol, which should be burned up later.
- When any liquid leaked out of a damaged glass cell comes in contact with your hands, please wash it off well with soap and water

### 13. Precaution for Use

#### 13.1

A limit sample should be provided by the both parties on an occasion when the both parties agreed its necessity. Judgment by a limit sample shall take effect after the limit sample has been established and confirmed by the both parties.

#### 13.2

On the following occasions, the handing of problem should be decided through discussion and agreement between responsible of both parties.

- When a question is arisen in this specification
- When a new problem is arisen which is not specified in this specification.
- When an inspection specification change or operating condition change in customer is reported to KINGTECH and some problem is arisen in this specification due to the change
- When a new problem is arisen at the customer's operating set for sample evaluation in the customer site.

# 14. Packing Method **TBD**
